

Qualifications . . .

LCSI was founded in 1985 by a team of top manufacturing, distribution, and consulting professionals.

Large-scale project experience and special techniques enable us to deliver high-quality, timely, and cost-effective solutions to our clients.

Fees . . .

Fees depend upon the nature and amount of work required. Payback to clients has averaged working capital reductions of more than 14 times the total compensation paid to LCSI.

Mission . . .

Our mission is to help our clients select and apply sound practices in the pursuit of excellence in all areas of manufacturing, distribution, and project management.

INVENTORY ?

MANAGEMENT CONTROL

Inventory . . .

Satisfying high expectations requires careful attention to key areas:

Quality - Customers require high quality products and services.

Time - Customers expect timely delivery of their orders.

Cost - Customers want competitive prices on products and services.

Options . . .

Experiment with a variety of methods until things get better.

Choose an area to focus on until a change is suggested.

Seek help in evaluating and selecting appropriate techniques.

Approach . . .

"What can be done to improve all areas of inventory control?"

From the organization of database records to physical storage of parts, activities supporting inventory control can be measured and improved.

"Can things get better on their own?"

Patterns reinforced for long periods are easier to change with outside help.

"What if information requirements are constantly changing?"

With new problem-solving and meeting-management skills, flexibility is quickly introduced into formal structures.

"Do employees need to visit other facilities to learn?"

Guidance for strengthening employee problem-solving skills is more effective when offered near work locations.

"What services do executives and their employees receive?"

To ensure that our clients receive high quality services, we provide project management assistance to executives and training tailored to small groups.

Benefits . . .

Better quality - Service levels and quality can be improved by using sound inventory management practices.

Faster delivery - Lead-times along with cycle times for all processes can be reduced by linking key activities.

Lower cost - Production and storage capacity can be used more efficiently by integrating fundamental tasks.

Recent projects offer suggestions for near-term improvement goals:

Restructured production flows and added controls to increase yield from 88% to 97%, thereby improving profits by \$2.6 million annually.

Directed implementation of a J-I-T system to reduce overall manufacturing cycle time by 94% in less than a year.

Developed methods for determining optimal storage locations for all parts, thereby reducing costs by \$280,000.

Designed a new monitoring system to reduce production delays 86%, thereby improving profits by \$600,000 annually.

Developed a site's first "dock-to-line" material control system that improved inventory turns by more than 300%.
